No personal respiratory protective equipment normally required. In inadequately ventilated areas, where workplace limits are exceeded, where unpleasant odours exist or where aerosols are in use, or smoke and mist occur, use self – contained breathing apparatus or breathing apparatus with a type A filter or appropriate combined filter (e.g. where aerosols are in use, or smoke and mist occur, A-P2 or ABEK-P2) In compliance with EN 141.

Hand protection

The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other. Please observe the instructions regarding permeability and breakthrough time which are provided by the supplier of the gloves. Also take into consideration the specific local conditions under which the product is used, such as the danger of cuts, abrasion, and the contact time. Be aware that in daily use the durability of a chemical resistant protective glove can be notably shorter than the break through time measured according to EN374, due to the numerous outside influences (e.g. temperature)

Gloves suitable for permanent contact:

Material: Fluorinated rubber
Break through time: >=480min
Material thickness: 0.4mm

Gloves suitable for splash protection:

Material: Nitrile rubber/nitrile latex
Break through time: >=240 min
Material thickness: 0.35mm

Unsuitable gloves:

Material: Natural rubber/natural latex, Polychloroprene, butyl-rubber, Polyvinylchloride.
